

Program Name: Defense Health Agency
Location: ECS Federal, LLC (US Army @ JBLM)

- **Description:**

Our client's goal is to utilize web, mobile, and gaming technologies to transform the delivery of military healthcare in order to provide timely access and advanced care no matter where in the world the recipient is located.

This is a really neat program - we support a military health program called Connected Health, with Web Developers, Graphic Designers, 3D Developers, Gaming specialists and Mobile development specialists. They create and develop software for mobile devices and personal computers, utilizing virtual reality, virtual worlds, and other innovative technologies focused on improving the resources for Psychological Health and Traumatic Brain Injury for service members, veterans, and their families.

DHA Connected Health (formerly the National Center for Telehealth & Technology) is the branch of the Defense Health Agency responsible for reviewing, evaluating, coordinating, and integrating the use and development of health technology supporting Military Health System (MHS) beneficiaries. These technologies include telehealth, mobile apps, mobile web, virtual reality, augmented reality, and wearable devices.

The mission of DHA Connected Health is to lead the innovation of health technology solutions that connect beneficiaries with their own care, and deliver tested, valued health solutions that improve the lives of our nation's warriors, veterans, and their families.

Our vision is leveraging technology to optimize health care across the Department of Defense (DoD).

The programs and products developed by DHA Connected Health align with the MHS Quadruple Aim to ensure readiness, population health, experience of care, and responsible management of the total cost of health care. DHA Connected Health also supports the DoD's goals of increasing access to care, establishing best practices and quality standards for health technology and telehealth, and reducing both military suicide rates and the prevalence of stigma associated with seeking health care services.
